How does Malwarebytes Anti-Malware differ from Antivirus?

Antivirus programs traditionally have focused on viruses. With the rapid rise of malware in the past ten years Antivirus failures have become

commonplace and a layered security approach is now universally encouraged. Malwarebytes was created during these failures to specifically focus on malware and the behaviors malicious programs exemplify, as well as blocking malicious websites, file executions, and zero day threats.

Layered security is essential for protecting the organization and an Antivirus or other security measure such as a firewall should be run alongside Malwarebytes Anti-Malware.

Why do I need Malwarebytes Anti-Malware?

Malwarebytes advanced technology protects businesses from the constantly-evolving threat that malware poses to corporate systems. From data loss to network corruption, undetected malware can wreak havoc in every avenue of an organization. Malwarebytes provides maximum protection while using minimal resources to keep resources focused on your business.
